

## CLAIMS:

1.           A data disc comprising  
          a first boot area; and  
          a second boot area, wherein depending on an application the disc is enabled to  
be booted from one of the first boot area and the second boot area.  
5
2.           The data disc of claim 1, wherein the data disc comprises a multi layer data  
disc, and wherein the first boot area resides on a first layer and the second boot area on a  
second layer.
- 10 3.           The data disc of claim 2, wherein the first boot area enables a standard boot  
and the second boot area enables an application specific boot.
4.           The data disc of claim 3, wherein the second boot area comprises an  
application identifier.  
15
5.           The data disc of claim 2, wherein the first boot area resides on a lead-in area of  
the first layer and the second boot area resides on a lead-out area of the second layer.
6.           The data disc of claim 5, wherein the lead-in area is located towards an inner  
20 side of the data disc and wherein the lead-out area is located towards an outer side of the disc.
7.           The data disc of claim 2, wherein the first boot area enables a first logical  
address-space mapping and the second boot area enables a second logical address-space  
mapping.  
25
8.           The data disc of claim 7, comprising one of a Portable Blue optical disc, a  
Blue-ray optical disc and a DVD optical disc.
9.           The data disc of claim 7, comprising a speed boot area on the second layer.

10. A system comprising a data disc drive, wherein the drive is enabled to use a data disc comprising a standard boot area and an application specific boot area, and wherein the drive is enabled to boot from the application specific area.
- 5
11. The system of claim 10 wherein the drive is enabled to use a data disc comprising a first layer comprising the standard boot area and a second layer comprising the application specific boot area.
- 10 12. The system of claim 11, wherein the drive is enabled to use the data disc using a logical address-space mapping scheme, wherein a first logical address-space starts on the second layer of the data disc.
- 15 13. The system of claim 12, wherein the drive is enabled to use the data disc that allows a multiple of logical address-space mapping systems.
14. The system of claim 10, wherein the drive is enabled to use a file system in accordance with the application specific boot area that facilitates a relative quick boot process.
- 20
15. The system of claim 10, wherein the data drive comprises one of a Portable Blue optical drive, a Blue-Ray optical drive and a DVD optical drive.
16. The system of claim 10, comprising at least one of a portable application, a custom application and a gaming application.
